

DEMONSTRATION FARMS AND TRAINING CENTRES

One of the biggest challenge that agriculture is facing is the speed of technological development. In order to keep on track continuous learning is unavoidable in every level of this sector. However, lifelong learning does not mean the same way as the ordinary secondary or high education. The roles of operating model-farms, technology integrators, dual education systems, etc. are substantial. To ensure the quality of these non-educational companies requires guidance and advices of teaching methodology.

During the workshop participants will share their experiences in vocational trainings, see the differences in different regions/countries. What are the differences between academic and practical on-site learning? The importance of internet and distance learning are discussed. What are the roles of e-learning tools and social media in vocational learning? Do we need a kind of common platform for education inside EUFRAS/IALB? Open discussions with active participation is expected in this workshop concluding guidelines for the future of training challenges.

Moderator: Attila Kovács, PhD, Széchenyi István University, Faculty of Agricultural and Food Sciences, Department of Biosystems and Food Engineering
